

Quite possibly the world's most innovative inverter.

We include features other manufacturers don't even offer as extras!

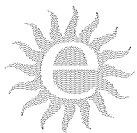

If you are interested in a quality, locally produced product, by a well respected and long standing local manufacturer then you should be talking with us. We may have a few competitors, but we have no competition at this level. We compare well on price and performance and no one can offer local support like we can.

Did you know that New Zealand products are classed as local content in Australia and that we can also speak Australian?

We do not just supply a great range of sophisticated products; we partner with you and help grow your market. We offer sales support, local training at your place for your sales and installation team.

Pick up the phone now! Well, send an email at least. Make a real difference to your business and let us prove how valuable local content and partnering is and we guarantee to exceed your expectations.

- *Free Wi-Fi. Ethernet optional.*
- *Wide voltage range, 100-550V.*
- *Fully outdoors mountable IP55 housing.*
- *Tap sensor on front housing, no switches to fail here.*
- *Free built-in web server for remote monitoring, from anywhere!*
- *Local New Zealand manufacturer with years of experience in power management.*
- *Front facing easy care heatsink, no creepy crawlies or birds will be living on this inverter.*
- *Built-in AC and DC isolator switches. Spend less time installing and save the cost of that switch and housing.*
- *A range to suit all your domestic installation requirements, 1.5, 2.0 and 3.0kW available now with a 4.0 and 5.0kW dual MPPT by end of year.*

ENASOLAR

one cool inverter.
